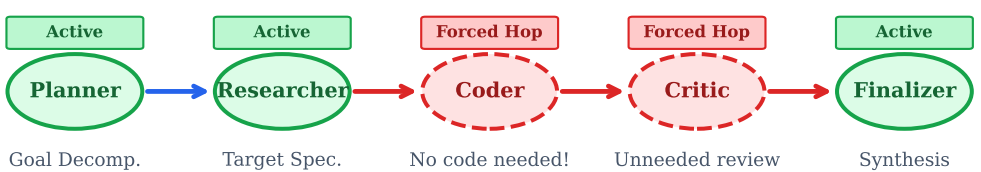
Representative Benchmark Query [res-001]: "Research the architectural differences between Transformer and Mamba SSM models."

Target Capabilities: [Research, Information Synthesis] | Irrelevant Capabilities: [Code Generation, Tool Execution, Verification]

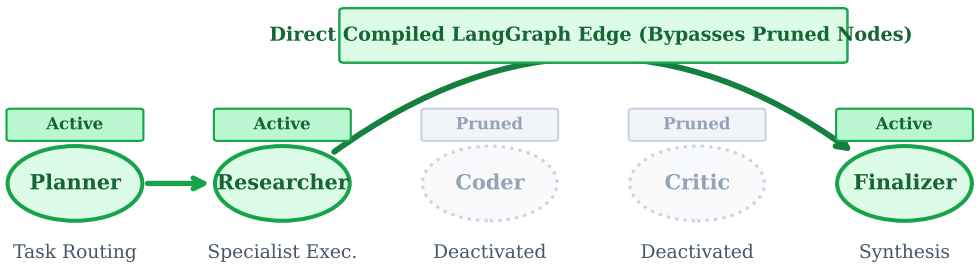
(a) Static Multi-Agent Baseline (Rigid Full-Team Traversal)



Rigid Linear Flaw: Traverses unneeded Coder & Critic nodes (No code requested)

Critical Path: 5 hops | Live Tokens: 9,656 | Latency: 65.8s | Cost: $0.0145

(b) AMAS Dynamic Execution (Task-Aware Optimized Path)



AMAS Topological Optimization: Q-Learning prunes redundant roles; compiles direct edge

Critical Path: 3 hops (40% reduction) | Live Tokens: 3,642 (62.3% Savings!) | Latency: 9.1s (7.2x Speedup)
